

IN THE SPECIFICATION

Please AMEND the paragraph beginning on page 7, line 23, as indicated below:

If the rib structure does not contain the above-described ~~above-described~~ material absorbent of visible light, the rib structure preferably has a diffuse transmissivity of 50 % or less. If the rib structure has a diffuse transmissivity of 50 % or less, i.e., if the rib structure has a scattering ratio of 50 % or more, the rib structure allows both the brightness and the contrast to be improved. The diffuse transmissivity is more preferably within the range of 10 to 50 %, particularly preferably within the range of 20 to 40 %.
